EXPERIENCE

GEP Worldwide

June 2023 – Sept. 2025

Software Engineer - Data Platform

Mumbai, Maharashtra

- **Re-engineered enterprise reporting workloads** from SQL Server to Azure Databricks using the Medallion Architecture and an internally developed Audit-Balance-Control (ABC) framework, enabling scalable Spark-based analytics and reporting.
- **Optimized large-scale reporting pipelines** and data processing workloads in Azure Databricks, reducing execution times for critical reporting jobs by up to **50%**.
- **Built and maintained Power BI semantic models**, tabular models, and DAX measures supporting enterprise reporting and analytics requirements.
- **Owned Dataplatform platform operations**, including production release cycles, production support, escalation management, ticket triage, and facilitation of Agile Scrum ceremonies.
- **Led reporting backend migrations** from GEP Smart (SQL Server) to GEP Quantum (MongoDB), reducing migration setup time from **7 days to 2 days** through automation utilities and standardized migration workflows.
- **Designed metadata-driven migration frameworks** that leveraged configuration data and domain models to automate reporting setup, schema reconciliation, and client onboarding with minimal manual intervention.
- **Implemented intelligent schema and column-mapping solutions** to bridge reporting differences between legacy and next-generation platforms while preserving existing client reporting experiences.
- **Developed automated report validation and data-quality frameworks** supporting **500+ reports**, **100+ clients**, and **12+ business modules** during large-scale platform migrations.
- **Partnered with product, technology service, implementation, and client teams** to design custom reporting solutions and translate complex business requirements into scalable reporting architectures.
- **Designed and delivered Project Savings reporting transformations**, enabling highly customized client reporting requirements through a reusable metadata-driven reporting framework.
- **Mentored new team members**, contributed to ABC platform enhancements, resolved production-critical defects, and drove continuous improvements to reporting infrastructure.

CogXr Labs

Sep. 2022 – Mar. 2023

Software Developer Intern

Remote, India

- **Built responsive UI screens using Flutter**, ensuring seamless cross-platform design and optimal app performance.
- **Integrated Firebase Cloud Storage** for backend storage and implemented push notifications using **Firebase Cloud Messaging (FCM)**.

PROJECTS

Project Savings Reporting Transformation | *DataBricks, ADF, MongoDB, SQL, Tabular Model*

- **Designed a metadata-driven reporting framework** to support client-specific Project Savings reporting requirements during the migration from Smart to Quantum.
- **Built dynamic ingestion and transformation pipelines** leveraging MongoDB domain models, configuration metadata, and master setup data to generate reporting datasets across diverse client reporting methodologies.
- **Delivered a unified reporting solution** capable of supporting multiple savings-calculation and reporting formats through reusable business logic rather than client-specific implementations.

Migration Automation for GEP Quantum | *Python, Power BI, SQL, MongoDB*

- **Built a low-touch, low-maintenance migration framework** to automate reporting migrations between Smart and Quantum platforms.
- **Developed metadata-driven utilities** that consumed SQL Server configurations and MongoDB domain-model definitions to automate reporting setup, model generation, and environment configuration.
- **Implemented intelligent schema-mapping and validation workflows** to reconcile structural differences between platforms while preserving existing report behavior and user experiences.

Report Validation & Data Quality Framework | *Python, DataBricks, MongoDB, SQL*

- **Developed an automated data-quality framework** to validate reporting consistency between Smart and Quantum during migration activities.
- **Validated 500+ reports** across **100+ clients** and **12+ modules** by comparing report outputs, metadata, and underlying datasets across platforms.
- **Identified critical reporting discrepancies and platform defects** prior to production deployments, reducing migration risk and improving reporting reliability.

EDUCATION

M.Tech. in Computer Science

International Institute of Information Technology (IIITH)

June. 2028(Expected)

Hyderabad, India

- **Coursework:** AI/ML, Probability & Statistics, Advanced Linear Algebra, Software Systems Development.

B.E. in Computer Engineering CGPA: 9.37/10

Aug. 2019 – May 2023

Terna Engineering College (University of Mumbai)

Navi Mumbai, India

- **Coursework:** Data Structures and Algorithms, Database Management And Systems, Big Data Warehousing, Python.

SKILLS

Languages & Databases: Python, C++, PySpark, SQL, MongoDB

Cloud & Data Engineering: Azure Databricks (ADB), Azure Data Factory (ADF), Delta Lake, ETL Architecture, Data Pipelines, Spark Performance Tuning, SQL Optimization

Tools & Methodologies: Power BI, Git/GitHub, Jira, Requirements Gathering, Data Analysis

ACHIEVEMENTS

- **GEP Kudos Achiever Award** (Jul. 2024 – Sept. 2024): Honored for exceptional technical execution and unwavering dedication to the organization.

LANGUAGES & INTERESTS

Languages: English, Hindi, Marathi (Full Professional Proficiency)

| **Interests:** Chess, Badminton, Reading
